## **DETAILED ACTION**

### ***Allowable Subject Matter***

Claims 1-7 are allowed.

The following is an examiner's statement of reasons for allowance:

The primary reason for the allowance of claim 1 is the inclusion of the limitation of a housing; a rotatable control means; and indicator arrangement; and a hybrid actuator, the hybrid actuator being substantially transparent to allow light from the indicator arrangement to be observed from outside the housing, the hybrid actuator being operable to engage with the rotatable control means and whereby to enable rotation about an axis; characterized in that the test apparatus includes: a rotatable test head, which has an engaging portion for engaging a head portion of the hybrid actuator; a light sensing means; a processing means for receiving sensed light data from the light sensing means, for receiving performance data from the electrical device and for controlling the movement of the rotatable test head; and a drive means for driving the rotatable test head about the axis in accordance with a control signal generated by the processing means. It is this limitation in the claimed combination that has not been found, taught, or suggested by the prior art that makes these claims allowable.

The primary reason for the allowance of claim 7 is the inclusion of the limitation of a housing; a rotatable control means; and indicator arrangement; and a hybrid actuator, the hybrid actuator being substantially transparent to allow light from the indicator arrangement to be observed from outside the housing, the hybrid actuator being operable to engage with the rotatable control means and whereby to enable rotation about an axis; the method characterized by the steps of: providing a test apparatus that includes: a rotatable test head; a light sensing

means; a drive means; and a processing means for controlling the movement of the rotatable test head; engaging the rotatable test head with a head portion of the hybrid actuator; driving the rotatable test head about the axis into a plurality of different testing positions in accordance with a control signal generated by the processing means; in each of the different testing positions, monitoring performance data for the electrical device; monitoring the light emanating from the hybrid actuator and generating sensed light data; and receiving and processing the sensed light data and the performance data and generating a report of the received data. It is this limitation in the claimed combination that has not been found, taught, or suggested by the prior art that makes these claims allowable.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
